

# Products for articulated vehicles semi-trailers trailers

# Operating Instructions, Repair Manuals and Maintenance Instructions

You will find these products in this catalogue

**1**  
Ball Bearing Turntables  
and Slewing rings

**2**  
Fifth Wheel Couplings 2"  
and Mounting Plates

**3**  
Heavy Duty Fifth Wheel  
Couplings 3½" 2", and  
Mounting Plates

**4**  
Slider for  
Fifth Wheel Coupling

**5**  
2" and 3½"  
King Pins

Selected Operating Instructions, Repair Manuals and Maintenance Instructions, which are referred to or appear in this catalogue, are applicable to the genuine product as manufactured/supplied by **JOST** Australia.

Where applicable, each product complies with the requirements of the Australian Design Rules (ADR's) 62/01, and the corresponding Component Registration Number (CRN) is detailed on the **JOST** Australia CRN List at the front of this catalogue.

For any enquires regarding **JOST** CRN's, please contact your local **JOST** Australia branch.

## **JOST AUSTRALIA PTY LTD** **A.B.N. 60 001 081 778**

**JOST Australia Pty Ltd is a Quality Endorsed Company** (QEC Lic. 10166), and complies to AS/NZS ISO 9001 and AS4801 for the following capability:

The registration covers the Quality Management System for the assembly and fitting of equipment for the truck and trailer industry including fifth wheels, landing gear systems, turntables, towing gear, hubodometers, mounting plates and associated replacement parts and accessories; the distribution of hydraulic hoists, pumps, valves, spare parts and accessories to the truck, industrial trailer.

**JOST Australia Pty. Ltd.**

Adelaide (08) 8260 4055

**Telescopic  
Landing Gear**

**Automatic Towing  
Hitches & Tow Eyes**

**Hubodometer  
and Hub Caps**

# Contents

Component Registration Numbers (CRN)	pages 6–8
Jost D-Rating Guide for Triple Road Trains	pages 9–11

<b>Ball Bearing Turntables and Slewing rings</b>	<b>pages 12–25</b>
Ball bearing turntables Series L and N	13–14
Ball bearing turntables Series HE and SO	15–16
Slewing ring Series KDL900/6W	17–18
Slewing ring Series KLK	19–20
Ball Race (Slew Ring) Service and Maintenance Bulletin	21–22
Ball bearing turntables	23–25

<b>Fifth Wheel Couplings 2" and Mounting Plates</b>	<b>pages 26–66</b>
Operating and Maintenance Instructions	27–30
Central Lubrication for 2" Fifth Wheels	31
LubeTronic for Fifth Wheels	32–33
JSK36DV1 Pivot Bearing Mount	34–35
JSK37CZ Rubber Mount	36–37
JSK37CX Rubber Mount	38–39
JSK37E Pivot Bearing Mount	40–41
JSK37EW Pivot Bearing Mount - Low Maintenance	42–43
JSK37CW Rubber Mounting - Low Maintenance	44–45
JSK42	46–47
JSK37 Sensor Coupling	48–49
JSK37027 Roll Back Application	50–51
LP37E Low profile stabilised ballrace assembly	52–53
LP37CZ Low profile stabilised ballrace assembly	54–55
LP37CX Low profile stabilised ballrace assembly	56–57
DR37CZ Double row stabilised ballrace assembly	58–59
DR37E Double row stabilised ballrace assembly	60–61
DR37CX Double row stabilised ballrace assembly	62–63
Base Plates to suit pivot bearing mount fifth wheels	64
Base plates to suit rubber mount fifth wheels	65
Easy connect	66

<b>Heavy Duty Fifth Wheel Couplings 3½" and 2"</b>	<b>pages 67–98</b>
Operating and Maintenance Instructions	68–69
JSK38DV90 Rubber mount fifth wheel	70–71
LP38DV Low profile stabilised fifth wheel 31/2"	72–73
DR38DV Double row stabilised fifth wheel 31/2"	74–75
JSK38C1 / JSK38C2 Rubber mount interchangeable fifth wheel	76–77
LP38C1 / LP38C2 low profile stabilised fifth wheel	78–79
DR38C1 / DR38C2 double row ballrace stabilised fifth wheel	80–81
JSK38G1 / JSK38G2 Cardan mount fifth wheel	82–83
JSK39CS and JSK39CW Rubber mount fifth wheel	84–85
LP39CS & LP39CSW Low profile stabilised fifth wheel	86–87
DR39CS & DR39CSW Double row stabilised fifth wheel	88–89
JSK50 Pivot bearing mount	90–91
JSK52 Heavy duty fifth wheel	92–93
Mounting plates and mounting instructions	94–98

<b>Sliders for Fifth Wheel Couplings</b>	<b>pages 99–109</b>
JSKSL Slider Fifth wheels	100–102
JSK37EVM Manual Slider Assembly	103–104
JSK37EVP Air operated slider assembly	105–106
DH200 Dual height fifth wheel	107–108
Ballrace Slider fifth wheel assembly	109

## 2" and 3½" King Pins

pages 110-120

Technical Circular <b>JOST</b> King Pins	111
King pin 2" KZ1008 - KZ1012	112
King pin 2" KZ1516	113
King pin 3 1/2" KZ1016	114
Heavy duty 3 1/2" king pin KZ5216	115
King pin 3 1/2" KZ1408 - KZ1412	116
King pin 3 1/2" KZ1416	117
King pin 2" KZ2816	118
King pin lock for 2" king pin	119
Wear limit gauge - King pin gauge	120

## Telescopic Landing Gear

pages 121-136

Modul landing gear information	122-123
Modul landing gear	124-127
A400 landing gear	128-129
Jost E110 landing gear	130-131
Mounting and maintenance instructions	132-133
Jockey Legs	134-136

## Towing Hitches & Tow Eyes

pages 137-163

Towing eyes	138-140
Jost tow eye lock	141
Welding instructions recommended for Rockinger drawbar eyes	142
Couplings and drawbar eyes	143-144
RO400	145-146
RO500	147-148
RO56E	149-150
RO243	151-152
RO283	153-154
RO805	155
RO244	156
Pintle hooks	157-159
Pintle hook mounts	160
Choice of the coupling /calculation	161-162

## Hubodometer and Hub Caps

pages 163-165

Hubodometers	164
Mounting Instructions for Hubodometer	165

## Alloy Wheels

pages 166-167

## Hydraulics

page 168

## Service Tools

page 169

# Component Registration Numbers (CRN)

**Note:** All D-Values have been transcribed directly from the original Component Test Reports.  
(Current from 14th April 2003)

## JOST Fifthwheels

Product Stock No	CRN & D-Value Specification		
JSK32AV	26278	D-Value: 160 kN	
JSK36DV1	26277	D-Value: 170 kN	
JSK36CV	41444	D-Value: 190 kN	150mm, 170mm, 185mm, 220mm, 250mm & 300mm pedestals
JSK37CZ	41876	D-Value: 190 kN	150mm, 170mm, 185mm, 220mm, 250mm & 300mm pedestal
JSK37E	36821	D-Value: 190 kN	(Same plate construction as JSK37CZ, but with pivot pedestals)
JSK37EW	36821	D-Value: 190 kN	(Greaseless version of JSK37E)
JSKSLE37E	42707	D-Value: 190 kN	
JSK37CZW	41876	D-Value: 190 kN	150mm, 170mm, 185mm, 220mm, 250mm & 300mm pedestals (Greaseless version of JSK37CZ)
JSK37CWS	41876	D-Value: 190kN	150mm, 170mm, 185mm, 220mm, 250mm & 300mm pedestals (Greaseless Sensor version of JSK37CZ)
JSK37CZS	41876	D-Value: 190kN	150mm, 170mm, 185mm, 220mm, 250mm & 300mm pedestals (Greaseable Sensor version of JSK37CZ)
JSK37CX	45374	D-Value: 240kN	150mm, 170mm, 185mm, 220mm, 250mm & 300mm pedestals
JSK37027	38553	D-Value: 200kN	
JSK37070	38553	D-Value: 200kN	
JSK38C1	24329	D-Value: 260 kN	
JSK38C2	42531	D-Value: 216 kN	
JSK38DV	36688	D-Value: 260 kN	
JSK38G1	24327	D-Value: 260 kN	
JSK38G2	42706	D-Value: 216 kN	
JSK39CS	45375	D-Value: 275kN	
JSK39CSW	45375	D-Value: 275kN	
JSK52	46422	D-Value: 400kN	
JSK50	24502	D-Value: 300 kN	
JSK36AV2	24497	D-Value: 162.4 kN	
JSK42ZJ	36130	D-Value: 200 kN	
JSK42WJ	36130	D-Value: 200 kN	
LP36CV	24835	D-Value: 190 kN	
LP37CZ / LP37CW	24836	D-Value: 190 kN	
LP37E / LP37EW	24833	D-Value: 190 kN	
LP37E027	40925	D-Value: 190kN	
LP37CX	46788	D-Value: 240kN	
LP37G240	24831	D-Value: 162.4 kN	
LP38C1	47221	D-Value: 240 kN	
LP38C12	24834	D-Value: 216 kN	
DH200 - Dual Height Fifthwheel	26983	D-Value: 120 kN	(max height: 290mm, min height: 165mm)
DR36CV	24832	D-Value: 190 kN	
DR37CZ / DR37CW	24842	D-Value: 190 kN	
DR37E / DR37EW	24840	D-Value: 190 kN	
DR38C1	24843	D-Value: 260 kN	
DR38C12	41443	D-Value: 216 kN	
LP39CS	47151	D-Value: 240kN	
LP39CSW	47151	D-Value: 240kN	
DR38DV90	36819	D-Value: 260 kN	

DR39CS	45373	D-Value: 275kN	
DR37CX	45372	D-Value: 240kN	
EVM SLIDER	26167	D-Value: 190 kN	For use with JSK36CV150 with EVM Slider
EVM SLIDER	26169	D-Value: 190 kN	For use with JSK37CZ150 with EVM Slider
EVP SLIDER	26168	D-Value: 190 kN	For use with JSK36CV150 with EVP Slider
EVP SLIDER	26170	D-Value: 190 kN	For use with JSK37CZ150 with EVP Slider
EVPLP SLIDER	24836 and 26170	D-Value: 190kN	
JSKSLE SLIDER	42707	D-Value: 190kN	
S036CV	24844	D-Value: 162.4 kN	
S037CZ	24845	D-Value: 162.4 kN	
S037E	24838	D-Value: 162.4 kN	

## JOST Kingpins

Product Stock No		CRN & D-Value Specification
KZ1008, KZ1010, KZ1012, KZ101216		24156 D-Value: 190 kN
KZ091201 (Part of the KZ0908 Assembly)	FEA Approved **	24857 D-Value: 108 kN
KZ1516	FEA Approved **	24344 D-Value: 162.4 kN
KZ1016		24292 D-Value: 400 kN
KZ1408, KZ1410, KZ1412	FEA Approved **	24811 D-Value: 162.4 kN
KZ1416	FEA Approved **	24812 D-Value: 200 kN
KZ1706, KZ1707, KZ1710, KZ1712	FEA Approved **	24856 D-Value: 152 kN
KZ101216		24156 D-Value: 190kN
KP2108		43948 D-Value: 190kN
KP2210		43949 D-Value: 190kN
KP2312		43950 D-Value: 190kN
KP3508		43487 D-Value: 260 kN
KP3510		43488 D-Value: 260 kN
KP3512		43489 D-Value: 260 kN
KP3516		42523 D-Value: 260 kN

## Buyers Pintle Hooks

Product Stock No		CRN & D-Value Specification
BDB1394		37264 D-Value: 165 kN
BPCPH15WMK		37267 D-Value: 75 kN
BPCPH20WMK		37268 D-Value: 100 kN
BPCP45AC4 & BPCP45AC6		37266 D-Value: 165 kN
BPCBH850MM		37265 D-Value: 30 kN
BPC PH 8 WMK		37270 D-Value: 50 kN
BPCPH5WMK		37269 D-Value: 35 kN
BPCPH30		44894 D-Value: 125kN
BPCPH50		45107 D-Value: 135kN
BPCRM650M		45999 D-Value: 42kN WITHOUT THE BALL
BPCRM650M		45999 D-Value: 17kN USED WITH BALL

\*\* Finite Element Analysis (FEA) has been approved for Kingpins by the Australian Standards Committee (Refer: Supplement 1-2002 to AS 2175-1995) as an alternative to physical testing.

## Rockinger Coupling

Product Stock No	CRN & D-Value Specification		
RO500 Rockinger Coupler	28986	D-Value: 260 kN (At ZERO download)	
RO500B66000B	43546	D-Value: 200kN	WITH 2500 KG DOWN LOAD
RO500B66500B	43545	D-Value: 285 kN	WITH 1000KG DOWN LOAD
ROE57005	49663	D-Value: 314kN	WITH ZERO DOWNLOAD
ROCKINGER 400	43196	D-Value: 130kN	WITH 1000 KG DOWNLOAD
ROCKINGER 243U130	43247	D-Value: 30kN	WITH 350 KG (MAX.) DOWNLOAD
RO850B30	49383	D-Value: 50kN	
RO860B40	49384	D-Value: 78.2kN	
RO860B50	49385	D-Value: 98.1kN	

## JOST & Rockinger Towing Eyes

Product Stock No		CRN & D-Value Specification	
ROE57374	(Replaces <b>JOST</b> Z046)	41539	D-Value: 120 kN
ROCK57394	(50mm Weld-In) (Replaces <b>JOST</b> Z059)	24529	D-Value: 314 kN
ROE57272	(50mm Weld-In) (Replaces <b>JOST</b> Z058)	41941	D-Value: 191 kN
ROCK57254	(50mm) (Replaces <b>JOST</b> Z060)	29201	D-Value: 191 kN
JOST0063126		41615	D-Value: 125kN
JOST106B2H		41613	D-Value: 200kN
JOST106B2R		41614	D-Value: 140kN
JOST57374		42704	D-Value: 120kN
JOST57272		42293	D-Value: 200kN
JOST57394		42305	D-Value: 280kN
JOST57254		42292	D-Value: 260kN
JOST57254E		42292	D-Value: 260kN

Theoretical towing capacity (in tonnes) of the coupling system based on tractor mass (tonnes) and coupling D Value (kN)

Calculation as follows:

$$D \text{ Value (kN)} = g \cdot (T \times R) / (T + R) \text{ or}$$
$$\text{Gravity (9.81ms}^{-2}\text{) X (Tractor Mass (t) X Trailer Mass (t)) / (Tractor Mass (t) + Trailer Mass (t))}$$

Example of 10t Tractor with a 74kN rated coupling equates to being able to tow a trailer with 30.7 tonne mass (in orange)

Coupling D Value (kN)

Trailer Mass (Tonnes)

Theoretical D Value (kN) calculations based on tractor and trailer mass (in tonnes)  
Calculation as follows:

Example of 10t Tractor towing 30t Trailer  
in green above

$D \text{ Value (kN)} = g \cdot (TxR)/(T+R)$  or Gravity  $(9.81\text{ms}^{-2}) \times (\text{Tractor Mass (t)} \times \text{Trailer Mass (t)})/(\text{Tractor Mass (t)} + \text{Trailer Mass (t)})$   
 D Value = 9.81 X (10x30)/(10+30)  
 D Value = 9.81 X 300/40  
 D Value = 73.575 kN  
 With Compliments from  
 D Value = 73.6 kN

# Ball Bearing Turntables and Slewing rings

# Ball bearing turntables – Series L and N

**L-series** = for farm carts and trailers with a speed up to 30 km/h (18 m.p.h.).

**N-series** = for heavy farm carts and light truck trailers with a speed above 30 km/h (18 m.p.h.).

Slewing rings are supplied undrilled and primed in black for corrosion protection. The measurements are subject to our standard tolerances. For the turntables of the N series the load limits are only valid for operation on paved roads and under conditions prevailing in Europe.

The axial load can be exceeded by 30 to 50% on the turntables of the N series if the speed is below 30 km/h (18 m.p.h.).

See reverse for fitting and maintenance instructions.  
The right to alter specifications is reserved.

## Fitting and Maintenance Instructions for L and N series

1. The ball bearing turntable must be mounted on a completely flat (max. unevenness 1mm) and horizontally and vertically rigid base with at least 50% of the circumference adequately supported. Particular attention should be paid to the support of the web section area containing the ball bearing races. Any unevenness under the flanges can be corrected with metal strips or by filling in with plastic metal.
2. Each flange must be attached with a minimum of 8 high tensile bolts grade 8.8, preferably M 10 × 1,25 (3/8 – 24) or M 12 × 1,5 (7/16–20) for sizes below 650 mm (25 5/8") dia. 4 to 6 bolts are adequate. In case of operation under adverse conditions, we recommend the use of bolts with enlarged contact surface (such as Tensi Lock or Verbus Ripp), or to increase the number of bolts. The thickness of paint between turntable and frame should not exceed 50mm to guarantee the fit to be friction-tight.
3. To ease the shear load on the mounting bolts at least four blocks should be welded on immediately adjoining each flange. The ball bearing turntable must not be mounted by means of welding.
4. **JOST** turntables are lubricated with a lubricant suitable for the type of operation and the adherent operating conditions before they leave the factory, however, the turntable must be adequately re-lubricated with high quality ball bearing grease (lithium saponified, NLGI class 2) before the trailer is put into operation for the first time. The relubrication should build up a collar of grease in the gap between the 2 rings of the turntable thus preventing ingress of grit and water into the ball races.
5. The ball bearing turntable must be lubricated according to use but at least once a month with a lubricant suitable for the type of operation and the adherent operating condition (lithium saponified, NLGI class 2). While lubricating the A-frame should be turned so that the grease is evenly distributed and a collar of grease is being built up in the gap between the 2 rings. The tightness of the mounting bolts should also be checked.
6. Ball bearing turntables are subject to wear. The limit of wear is reached when there is 2,5 mm axial play. This is the case at the very latest when the air gap X = 1 mm at any point on the circumference of the turntable.

# Ball bearing turntables – Series HE and SO

For drawbar trailers and special trailers

**HE**  
**Standard**

**SO**  
**Standard**

**Note:** SO100024 used in SO assembly  
Ball bearing turntables are supplied undrilled.  
\*drilled and primed in black for corrosion protection.

The measurements are subject to our standard tolerances.

The above axial loads are applicable if the slewing ring is mounted to the front axle of the trailer with three/four axles at speeds of up to 105 km/h (65 mph).

They can be exceeded by 10% for full trailers with two axles.

In case of speeds below 30 km/h (18 mph) the axial loads can be exceeded by 20%.

If required axial loads exceed the data permitted for turntables of series HE/SO, please ask for slewing rings of series KDL900, which allow axial loads up to 250 kN.

In case of use above the steered axle and above the fifth wheel on semi-trailers with rear axle steering please enquire as to the load data giving details of the vehicle.

The load limits are only valid for operation on paved roads and under conditions prevailing in Europe.

See reverse for fitting and maintenance instruction

## Fitting and Maintenance Instructions for HE & SO

Hexagon bolt DIN 931

M 16-8.8 tightened to 210 Nm,  
or preferably according to  
DIN 960/961 M 16 x 1,5 - 8.8  
tightened to 225Nm

Alternative mounting with  
bolt head underneath counter  
nut also admissible

Hexagon nut DIN 980

M 16-8.8 or preferably  
M 16 x 1,5 - 8

1. The ball bearing turntable must be mounted on a completely flat (max. unevenness 1mm) and horizontally and vertically rigid base with at least 50% of the circumference adequately supported. Particular attention must be paid to the support of the web section area containing the ball bearing races. Any unevenness under the flanges can be corrected with metal strips or by filling in with plastic material.
2. Each flange must be attached with at least 8 high tensile bolts, M 16 x 1,5 of grade 8.8. Do not drill in the area of the type plate ball insertion hole which should be at less than 30° to the direction of travel. In case of operation under adverse conditions, we recommend the use of bolts with enlarged contact surface (such as Tensi Lock or Verbus Ripp), or to increase the number of bolts from 8 to 12 per flange. This applies in particular to type HE130022. The thickness of paint between turntable and frame should not exceed 50 mm to guarantee the fit to be friction-tight.
3. To ease the shear load on the mounting bolts at least four blocks should be welded on immediately adjoining each flange. The ball bearing turntable must not be mounted by means of welding.
4. **JOST** ball bearing turntables are suitably lubricated before they leave the factory. Before the trailer is put into operation for the first time, however, they should be re-lubricated with a high quality lithium saponified turntable grease of NLGI class 2 through all the grease nipples. The re-lubrication should build up a collar of grease in the gap between the 2 rings of the turntable thus preventing ingress of grit and water into the ball race. If a central lubrication system is to be used the quantity of lubrication nipples should be increased (please specify when ordering) and the above mentioned grease specification observed, however NLGI consistency class min 1.

5. The ball bearing turntable must be lubricated according to use but at least once a month with a high quality lithium saponified turntable grease of NLGI class 2. lubricant suitable for the type of operation and the prevailing operating conditions. While lubricating the A-frame should be turned so that the grease is evenly distributed and a collar of grease is being built up in the gap between the 2 rings. The tightness of the mounting bolts should also be checked.
6. Ball bearing turntables are subject to wear. The limit of wear is reached when there is 3,5 mm axial play. This is the case at the very latest when the air gap X = 0 mm at any point on the circumference of the turntables.

## Drilling pattern for ball bearing turntables

## Fitting and Maintenance Instructions for Slewing Rings KDL900/6W

1. The slewing ring must be mounted on a completely flat (max. unevenness 1mm) and rigid base with at least 50% of the circumference adequately supported. Particular attention must be paid to the support of the web section area containing the slewing ring races. Any unevenness under the flanges can be corrected with metal strips or by filling in with plastic metal.
2. Each flange must be attached with at least 12 high tensile bolts M 16 x 1,5 of at least grade 8.8. Do not drill in the area of the ball insertion hole, which should be at less than 45° to the direction of travel. The thickness of paint between slewing ring and mounting should not exceed 50 microns to guarantee the fit to be friction-tight.
3. To ease the shear load on the mounting bolts in the case of horizontal force at least 4 blocks should be welded on immediately adjoining each flange. The slewing ring must not be mounted by means of welding.
4. **JOST** slewing rings are initially lubricated before they leave the factory. Before they are put into operation for the first time however they must be adequately re-lubricated with ball bearing grease (lithium saponified, NLGI class 2). Whilst

lubricating the slewing ring should be turned so that the grease is evenly distributed. If a central lubrication system is to be used we recommend increasing the number of grease nipples (please state on order) and using a high quality lithium saponified ball bearing grease of at least NLGI class 1.

5. The slewing ring must be lubricated according to use but at least once every 3 months or 25,000 km, using a high quality ball bearing grease (lithium saponified, NLGI CLASS 2). Whilst lubricating the A-frame should be turned so that the grease is evenly distributed.

The tightness of the mounting bolts should also be checked at regular service intervals.

6. Slewing rings are subject to wear. The limit of wear is reached when the axial play is 3.5 mm. This is at the latest the case when the distance X < 8 mm at any point on the circumference.

### Wear Limits

Radial play - max. 3.0mm

Axial play - max. 2.5mm

# Slewing ring - Series KLK

## Double Row Ballrace Models

### Model

#### Double Row Ballrace KLK Series

**Typical applications:** Dairy Tankers, Tri Axle Tippers  
**D-Value Rating:** 275kN

- Ballraces are supplied E-coated.
- 8 lubrication points enable the best possible distribution of grease.
- Labyrinth seal.
- Supplied drilled/undrilled.

The specified axle loads for KLKDR series relate to use where the slewing ring is mounted on the front axle of a trailer with three axles and fifth wheel steering, travelling at speeds of up to 100kph (65mph). On dual-axle trailers, the specified axle load can be exceeded by 10% of 20% at speeds below 30kph (18mph).

Type	D-Value (kN)	A (mm)	B (mm)	C (mm)	D (mm)	E (mm)	F (mm)	d (mm)	Weight kgs
KLKDR41AS010K	160	987	1000	868	842	952	966	18	73
KLKDR4100010K	160	987	1000	868	842	952	966	N/A	73
KLKDR210010K	160	1095	1108	9776	950	1060	1075	N/A	80
KLKDR110020	200	1095	1108	976	950	1060	1074	18	80
KLKDR4200010K	200	1095	1108	976	950	1060	1074	N/A	80
KLKDR4400010K	300	1195	1208	1076	1050	1160	1074	N/A	92

Note: The pre-drilled hole pattern on the KLKDR41AS010K is suited only for a DR assembly replacement. Other ballraces are undrilled as standard. For any special drilling requirements please contact JOST Australia.

The measurements are subject to our standard tolerances.

## Design and Features

The ball bearing turntables enable the rotation of the pivot support towards the trailer frame. Thanks to the functional design, the axial loads are ideally supported and the thrust and tractive forces which occur when driving are transmitted in an optimal fashion.

### The advantages at a glance:

#### Premium force transmissions for the highest demands

- The extra large support balls transmit the axial loads over a wide area directly onto the vertical bar of the ring parts
- Horizontal forces in pull or push direction, as well as the moment load resulting from braking and centrifugal forces, are supported by the interplay of the two ball rows
- Lifting forces are transmitted by the smaller radial ball
- Optional fastening using splined bolts, making additional welding of thrust plates unnecessary

### Durable construction with very little wear

- The use of high-strength steel ensures the greatest possible surface quality
- Cold-twisting of tracks by shrinking the ball gearing turntable reduces wear to a minimum and increases lifespans significantly
- A robust labyrinth seal protects the tracks from dirt, even in extreme conditions
- The particularly large grease reservoir resulting from the free space between the tracks guarantees smooth running thanks to optimum lubrication.
- 8 lubrication points enable the best possible distribution of grease within the tracks with just minimal rotation (+/- 20°) during lubrication.
- Optionally available with pre-assembled lubrication block to ensure ideal access to the lubrication points or as preparation for connection to a central lubrication system.

Note: D-values may vary when used in conjunction with additional JOST products that have been tested and carry a CRN number. Contact your local JOST branch for further details.

## Fitting and Maintenance Instructions for Slewing Ring KLKDR

1. Upper ring
2. Lower ring
3. Chassis
4. A-frame
5. Thrust plates bottom
6. Thrust plates top
- A. Position of the type plate
- B. Position of the ball bearing filling hole

### 1. Standard mounting.

The ball bearing turntable must be fitted on a flat (max. offset 1mm) support construction that provides torsional, longitudinal and lateral rigidity. To ensure there is an adequate transfer of force, at least 50% of the flange surfaces must be supported with weight-bearing structures. The bearing zone must be distributed evenly in and lateral to the direction of travel and be designed so that the ball bearing turntable is supported in the area of its vertical profile bars, i.e. the ball race-ways. Larger planarity deviations can be compensated with shim panels. With undrilled turntables, the following must be noted with drilling the fastening holes.

- That no drill chips or cutting fluid gets into the raceway.
- That no holes are drilled in the vicinity (+/- 15mm) of the ball insertion hole or in the vicinity of the welds.
- That the type plate is placed at 90 degrees to the right of the vehicle and the ball insertion hole is placed at 90 degrees to the left of the vehicle to remove the smaller cross-sections from the area under maximum stress.
- The lubricating nipples are easily accessible.
- Free motion of the swivel movement is ensured.

### 2. Assembly

Series	Screws of quality class 8.8	Torque <sup>1)</sup>
DR	Min. 8 hexagon screws per ring section DIN EN ISO 8765/8676 (DIN 960/961) M16 x 1.5	225 Nm
	Alternatively DIN EN 24014 (DIN 931) M16	210 Nm

<sup>1)</sup> Setting value, tighten the screw connection with torque wrench DIN EN ISO 6789, class A or B.

Series	Nuts of quality class 8
DR	DIN EN ISO 7042 (DIN 980)

### Special fastening

### Notes on fastening

Screws of strength class 8.8 must be used for fastening. The screw connections must be secured using state of the art methods to prevent them coming loose.

Do not secure the ball-bearing turntable by welding.

In general, the layer thickness of the paint build-up must be no more than 170 µm per component in the screws grip area so that a perfect friction lock is guaranteed without settling.

The values shown are guide values for a coefficient of friction  $\mu_{tot.} = 0.14$ . Further information is available in VDI 2230. Tighten screws with a suitable tool diagonally. In case of fastening with a low number of screws or small screw size, at least the same overall stability must be achieved.

In more arduous operating conditions, we recommend installing screws with a spacer sleeve or increasing the number of screws in order to maintain the correct pre-tensioning force. With different screw connections, as shown in position (1) and (2), free movement of the turntable must be absolutely guaranteed, especially in the area of the lubricating nipples and the type plate.

### Thrust plates

## Special fastening with JOST splined bolts (fastening without thrust plates)

When used on single axle bogie steering systems at axle loads of up to 10t, the standard hole patterns can be used as per the JOST product data sheet in combination with splined bolts for attachment to the vehicle without the use of thrust plates. If the axle load of the bogie is greater than 10t, we recommend using at least 12 securing points per ring, distributed as evenly as possible, with splined bolts. In order to ensure that the fitting of the turntable or slewing ring is under as little strain as possible, a positional accuracy for the hole pattern of 0.6mm and a drilling diameter of  $18 \pm 0.1$ , should be observed. More detailed information can be found in our installation instructions for JOST splined bolts.

## Thrust plates

To relieve the thrust force on screws subject to horizontal forces, the fitted ball bearing turntable must be attached to the flanges with four pre-welded thrust plates and there must be no play between the components. Use the welding methods set out by the trailer's manufacturer for this purpose. In cases of special fastenings with JOST splined bolts there are no thrust plates required, if the requirements specified in 'special fastening' are met.

## Coating

The JOST DR series has a permanent cathode dip coating. The CDC offers the ideal surface sealing method and therefore excellent protection against corrosion. Thanks to the evenly thin coating, it may be painted over at any time.

## Standard Mounting

Fastening set KLE0000500 (16 screws M16 x 1.5 x 55 - 8.8, 16 nuts M16 x 1.5 - 10 and 8 thrust plates).

## Special fastening with JOST splined bolts

Min. 8 JOST splined bolts M16 x 55-10.9 per ring section and matching JOST nuts M16-10.9, tightening torque 300Nm.  
Fastening set KLE0000300 (16 splined bolts and nuts)  
Fastening set KLE0000400 (24 splined bolts and nuts)

## Standard ball bearing turntables

Standard ball bearing turntables are supplied with light basic lubrication. Before commissioning, the turntable must be given a thorough re-lubrication over all lubricating nipples with a high quality rolling bearing grease (lithium soap, NLGI consistency class 2), with a closed bead of grease sealing the bearing clearances against the penetration of dirt and spray water. We recommend the use of JOST high performance lubricant (SKE005670000). Where a central lubricating system is used, a high quality rolling bearing (lithium soap, NLGI consistency class min. 1) should be used. At least 6 lubricating nipples should be connected.

## Maintenance

The ball bearing turntable must be lubricated at least every 8,000 to 10,000km, or once a month, with a high quality rolling bearing grease (lithium soap, NLGI consistency class 2). This is done by swivelling the bogie backwards and forwards until as closed a bead of grease as possible comes out from the entire length of the bearing clearances or sealing lips. We recommend the use of JOST high performance lubricant (SKE005670000).

- If the ball bearing turntable is used in forced steering systems, the servicing instructions of the manufacturer must be observed.
- The screw connections must be checked as part of the vehicle inspections, but no later than 50,000km, to ensure they are tightened to the prescribed tightening torque.
- Check for wear.
- Ball bearing turntables and their fastening elements, must be checked for excessive corrosion, damage or cracks.

## To check for wear

Series	Maximum axial play	Minimum air gap X
DR	3.5 mm	0.0 mm

## Safety information for maintenance

- Only use the specified lubricating grease for servicing work.
- The servicing work should only be completed by trained personnel.

## Safety information for installation

- Do not change the installation area defined by the trailer's manufacturer.
- The assembly work may only be completed by authorised specialists.
- Instructions from the trailer's manufacturer must be observed e.g. the type of fastening and support construction.
- The installation guidelines provided by the trailer's manufacturer must be complied with.

## Advice

Technical modifications reserved. The latest information can be found at [www.jostaustralia.com.au](http://www.jostaustralia.com.au) or [www.jost-world.com](http://www.jost-world.com)

# Ball Race (Slew Ring) Service and Maintenance Bulletin

Note: JOST ball races are initially lubricated before they leave the factory. Before they are put into operation for the first time however they must be adequately re-lubricated with ball bearing grease.

## Recommended grease types

JOST ball races – Lithium Saponified, NLGI class 2. (Use class 1 grease if a central lubrication system is to be used)

BPW Double Row – BPW special long life grease ECO-Li 91 Lithium Complex Grease.

The grease must not be mixed with other calcium base or sodium base lubricants.

Ball races should be lubricated at least every 25,000kml or every 3 months, or sooner depending on the application. Under extreme or arduous operating conditions greasing may be required weekly. The ball race should be rotated during greasing to ensure that the grease is distributed evenly.

The tightness of the mounting bolts should also be checked at regular service intervals.

Ball races are subject to wear. It is recommended that the ball race be replaced when the wear limits are reached.

Jost KDL	900/6 Radial Play max 3.0mm – Axial Play max 3.5mm (< 01.2010)
Jost KDL	900/6W Radial Play max 3.0mm – Axial Play max 3.5mm (> 01.2010)

# JOST ball bearing turntables

## Innovative technology, proven quality

Ball bearing turntables and slewing rings are parts for fitting onto trailers and agricultural vehicles to connect the A-frame to the trailer chassis so it can swivel. They are the products which started the success story of JOST in 1952. Today, they are used on all the world's roads. And not only that: They are also used in agriculture, at airports and railway stations, in mining and in a wide range of special applications, such as in TRIDEC forced steering. The ball bearing turntables are subject to constant further development, so that they impress with their innovative benefits and proven quality time and again.

### E-coating

- Premium corrosion protection
- Additional top coat on request

### Verified safety

- Tested in accordance with ECE R55
- Environmental management in accordance with ISO 14001
- Quality management in accordance with ISO/TS 16949

### Weight advantage

- Up to 10 kg lighter than comparable products

#### Splined bolt

- Assembly kit with special screws, making use of additional welded thrust plates unnecessary
- Item number KLE0000300 (16 pieces)  
Item number KLE0000400 (24 pieces)

### Mounting kit KLE0000500

Item	Description	per kit
01	Hexagon screw M16x1,5x55	16
02	Hexagon nut M16x1,5	16
03	Stop block	8

### Central lubrication manifold

- Makes lubrication easier
- Makes connection to central lubrication system easier Item number KLE0000200

### High performance lubricant

- JOST high performance lubricant for initial greasing or follow-up lubrication in a practical refill set
- Item number SKE005670000

### Low maintenance

- Low maintenance version for HE and KDL available

# Product overview: Ball bearing turntables

## Ball bearing turntables KLKHE and SO

- E-coated
- Standard or low maintenance (HE series)
- Drilled or undrilled
- Lubrication manifold (optional)
- Splined bolts (optional)

## Ball bearing turntables KCLK and N

- E-coated
- Undrilled
- L series: Agricultural trailers and transportation devices up to 30 km/h
- N series: Heavy agricultural trailers and light truck trailers over 30 km/h

## Slewing ring KDL900

- E-coated
- Low maintenance
- Drilled or undrilled
- Hardened bearings
- Lubrication manifold (optional)
- Splined bolts (optional)

## Ball bearing turntables KCLKND

- E-coated
- Drilled or undrilled
- Lubrication manifold (optional)

## Customer-specific drilling patterns

- Even in small batch sizes

# Axial load

The application of ball bearing turntables and slewing rings depends on the permissible axial load. JOST ball bearing turntables and slewing rings cover an axial load range of between 7.5 and 250 kN.

All load data for the KDL, HE, SO, ND, L and N series apply for operation in pivot support steering systems on paved roads and under the transport conditions common in Central Europe.

## Maintenance

### Standard

JOST standard ball bearing turntables are supplied with a thin base coating of lubricant. Before it is used for the first time the ball bearing turntable must be lubricated thoroughly. See JOST installation and operating instructions.

Connection to the central vehicle lubrication system is possible (grease is essential, rather than oil).

### Low maintenance

The low-maintenance versions of ball bearing turntables and slewing rings mean they do not have to be maintained for up to three years or 300,000 km. After this period they must be serviced in the same way as standard turntables. The low-maintenance models are distinguished by a green type plate and by the letter "W" at the end of the item number. Maintenance conditions differ when fitted to steered semi-trailers or in the case of heavy conditions of use. The maximum storage period for maintenance-free ball bearing turntables and slewing rings is three years.

# Operating and Maintenance Instructions for JOST grease type fifthwheels

**STOP**  
**DRIVERS ensure that you get a ✓ when coupling!**

Diagram 1

Diagram 2

Failure to ensure that trailer rubbing plate is set **below** the fifthwheel plate when coupling up could result in loss of your trailer or damage to your truck or trailer.

Regardless of whether you have air or spring suspension, ALWAYS follow the coupling CODE to ensure the king pin is securely engaged with the fifthwheel. This following coupling CODE is issued by **JOST** Australia Pty Ltd.

## The Coupling Code

*The fifthwheel must be angled down to the rear of the truck and the mechanism in the pre-set position.*

*Ensure that the trailer rubbing plate is below the height of the fifthwheel plate (refer Diagrams 1 and 2).*

*Reverse the truck slowly under the trailer, aligning the king pin with the centre of the fifthwheel.*

*Continue reversing until the mechanism locks and secures the king pin.*

*Pull forward against the trailer brakes to ensure engagement of the king pin in the fifthwheel.*

*Visually check to see that there is no gap between the fifthwheel plate and trailer rubbing plate and that the king pin is secured correctly within the fifthwheel mechanism.*

**Finally, ensure that the automatic secondary locking device is engaged (as per Diagram 3). If it is not engaged, the whole coupling up procedure must be repeated.**

**Note: Pending the fifthwheel model, coupling code may vary.**

Diagram 3

**Failure to read, understand and follow the important information contained above may result in a hazardous condition or cause a hazardous condition to develop.**

# Operating and Maintenance Instructions for JOST greaseless fifthwheels

**STOP**  
**DRIVERS ensure that you get a ✓ when coupling!**

Failure to ensure that the trailer rubbing plate is set level with the fifthwheel plate when coupling up, could result in loss of your trailer or damage to your truck or trailer.

Regardless of whether you have air or spring suspension, ALWAYS follow the coupling CODE to ensure the king pin is securely engaged with the fifthwheel. This following coupling CODE is issued by **JOST** Australia Pty Ltd.

## The Coupling Code

*The fifthwheel must be angled down to the rear of the truck and the mechanism in the pre-set position.*

*Ensure that the trailer rubbing plate is level with the height of the fifthwheel plate (refer Diagrams 1 and 2).*

*Reverse the truck slowly under the trailer, aligning the king pin with the centre of the fifthwheel.*

*Continue reversing until the mechanism locks and secures the king pin.*

*Pull forward against the trailer brakes to ensure engagement of the king pin in the fifthwheel.*

*Visually check to see that there is no gap between the fifthwheel plate and the trailer rubbing plate and that the king pin is secured correctly within the fifthwheel mechanism.*

**Finally, ensure that the automatic secondary locking device is engaged (as per Diagram 3). If it is not engaged, the whole coupling up procedure must be repeated.**

Diagram 3

**Failure to read, understand and follow the important information contained above may result in a hazardous condition or cause a hazardous condition to develop.**

## Locking device

Locked with spring latch closed

Set for coupling

- Automatic setting to couple up
- Fully adjustable wear
- Easy maintenance

## Type of mounting

**E =** Pivot bearing mounting  
Slack and maintenance free.  
Oil and grease resistant

**C =** Rubber mounting  
Shock absorbing by large rubber pads.  
Slack and maintenance free.  
Oil and grease resistant

# Low Maintenance Fifth Wheel Couplings JSK37

## Selection criteria, maintenance, mounting instructions and user information for the top plate liner

### Coupling Code

The fifth wheel must be angled down to the rear of the truck and the mechanism in the present condition. Ensure that the trailer rubbing plate is level with the height of the fifth wheel plate. Reverse the truck slowly under the trailer aligning the king pin with the centre of the fifth wheel.

Continue reversing until the mechanism locks and secures the king pin. Pull forward against the trailer brakes to ensure engagement of the king pin in the coupling.

Visually check to see that there is no gap between the fifth wheel plate and the trailer rubbing plate and that the king pin is secured correctly within the fifth wheel mechanism.

Ensure lock catch is secured in the locked position.

### Selection Criteria

The main characteristics of the **JOST** low maintenance fifth wheel coupling JSK37 are their excellent sliding properties (equivalent to a well lubricated fifth wheel) and their long life.

The fifth wheel was designed in particular for articulated vehicles with high mileage which are rarely uncoupled and run for long periods between services, e.g. tankers and tilts.

This high quality, low maintenance fifth wheel will offer you a long life span if you

- Couple up carefully: the fifth wheel should be at the same height as the skid plate (air suspension vehicles are advantageous)
- Make sure that the skid plate resp. guide rails to the skid plate are the correct size. They should have no sharp edges, steps or welding seams in the coupling up area.

- Ensure a flat, smooth surface of the skid plate and contact area.
- Grease the skid plate lightly to protect it from corrosion. The liner is not adversely affected by grease.

If these points are not observed the liner may be damaged.

Articulated vehicles with more complex load requirements (e.g. on building sites) and/or semi-trailers with rigid chassis (e.g. tankers) are liable to increase wear on the liner.

The liner is bolted onto the fifth wheel and can be easily replaced.

### Maintenance of the Locking Mechanism

Lubrication of the liner is not necessary.

The fifthwheel has only one lubrication point for the lock jaw.

Uncouple at the latest every 50,000 Km or six months, depending on usage. Clean the fifth wheel with liner and the skid plate. Check the liner for damage and wear. Lubricate the lock jaw and king pin with high pressure grease (EP) with MoS<sub>2</sub> or graphite additive (e.g. L21M, Esso universal grease M or Shell Retinax AM).

The grease nipple on the edge of the fifth wheel plate is for lubricating the lock jaw and king pin between service.

The life expectancy of the lock jaw and king pin depend on effective lubrication before being put into service and after every cleaning operation.

For further information please refer to the **JOST** repair instruction booklet.

# Central Lubrication for 2" Fifth Wheels

## Models JSK37 Series

The fifth wheels JSK37CZ and JSK37E Series are supplied with additional lubrication for the lock jaw and the king pin.

In order to connect the fifth wheels to the central lubrication system of the prime mover it is necessary to replace the 4 grease nipples under the fifth wheel plate and the 2 at the side with suitable screw couplings and connect them to flexible tubing, which is in turn joined up to a distributor unit compatible with the respective central lubrication system.

As a lubricant we recommend grease or liquid grease. Fifth wheels with central lubrication should be thoroughly cleaned and inspected for wear, damage and correct functioning at least once a year, or at the latest after 50,000 km, and repaired if necessary. Before coupling up again the fifth wheel and the king pin should be manually lubricated with high pressure grease (EP) with MoS<sub>2</sub> or graphite additive.

# LubeTronic

## Lubrication of the wheel coupling

### Guaranteed safe and automatic for 3 years

**JOST, the market leader in the area of couplings for trucks and trailers, remains on its innovative course. The new development LubeTronic saves time and money and simplifies the day-to-day life of drivers and freight forwarding companies.**

### Always lubricates safely

- The special coating on the lock jaw makes the surface extremely durable. This allows the lock jaw to be operated with a minimal amount of lubricant.
- Excellent emergency running properties allow the coating to handle short-term operating even without lubricant.
- Outstanding lubricant qualities thanks to novel lubricants from high-performance grease and continuous lubrication.
- Temperature range: -20°C to +70°C
- Electronic dose dispensing reduces both costs and environmental impact
- Completely sealed and immersion tested (IP 68)

### Simple maintenance

- LubeTronic is easy to mount
- Self-regulating system with electronic monitoring signal on the cartridge
- Guaranteed 3 year life span
- Maintenance time savings
- Potential upgrading of all low-maintenance couplings
- Very light and compact
- With shockproof metal bracket
- Not recommended for usage in the construction industry
- Repair kit (complete) with cartridge:  
Order No. SKE004070000

# LubeTronic

## Less Maintenance - Greater Safety

**JOST**, the market leader in the area of couplings for trucks and trailers, remains on its innovative course. The new development LubeTronic saves time and money and simplifies the day-to-day life of drivers and freight forwarding companies.

The lock of the fifth wheel holds the king pin firmly in place; it used to be one of the last maintenance-intensive elements in the system. LubeTronic allows this system to run practically maintenance-free for three whole years. The grease is discharged in an electronically controlled manner; the lock and king pin are always optimally lubricated. **JOST** guarantees automatic and safe operation of the LubeTronic for three years. The lubrication cartridges discharge its lubricant in a constant, uniform manner over a wide temperature range from -20 to +70 degrees Celsius and the entire system has been underwater-tested according to IP 68.

### Simple Assembly - Significant Action

The LubeTronic retrofit kit includes a specially coated lock, which, together with the electronically regulated lubrication cartridge, is a system patented by **JOST**. The coating makes the surface of the lock particularly resistive and durable, so that even minimal quantities of the lubricating grease are sufficient. This is efficient and eco-friendly at the same time. The coating is so efficient that it even allows running without lubricant for short periods, although this is not recommended!

The lock holds the king pin and with it, the entire support system, coupled firmly with the traction engine. So far, regular lubrication by hand or by means of an expensive central lubrication was required, because the lock and king pin wear quickly without lubrication and have to be replaced. The traditional lubrication aids - which are mostly lubricating cartridges operated with overpressure - discharge grease smoothly and uniformly only within a narrow temperature range. All the maintenance procedures for the fifth wheel, which are not only uncomfortable and time-consuming, but above all, relevant for safety, are rendered redundant by LubeTronic.

# JSK36 DV1 Pivot Bearing Mount

## Pressed Steel

### Rubber cushioned pivot bearings

**Application:** General Freight  
Tipper work

For use with single trailers and B Double (not Road Train)

D-value 170 kN  
CRN 26277  
Weight approx. 136 kg (bolt on feet)  
(for 150mm height)

Available with Fabricated-weld on Pedestals upon request.

Mounting must be carried out in accordance with our instructions.

# JSK37CZ Rubber Mount

With Wear Ring & External Jaw Lubrication

**Applications:** Tanker  
General freight  
Fridge van  
B-double  
Road train

The fifth wheel comes standard with bolt on/weld on feet.

The fifth wheel coupling can be linked to the central lubrication system of the prime mover.

Lock jaw and wear ring can be replaced without difficulty in a few minutes with the fifth wheel still in position.

Shock absorbing large rubber pads. Oil and grease resistant.

Mounting must be carried out in accordance with our instructions.

## With Wear Ring & External Jaw Lubrication

### Applications: Highway Work Tipper Work

Lock jaw and wear ring can be replaced without difficulty in a few minutes with the fifth wheel still in position.

Available with extended operating handle (240mm) on demand.

Mounting must be carried out in accordance with our instructions.

Mounting hole pattern in accordance with DIN standard 74081 and ISO standard 3842. Suitable for all types of rear axle steering systems.

The right to alter specifications is reserved.

# JSK42

## Technical Specification

The fifth wheel coupling complies with the following directives/ standards: 94/20/ EC - Class G50, DIN 74081, ISO 3842. Suitable for mounting 2" king pins (50) as per 94/20/EC, DIN 74085, ISO 337 and steering wedges as per 94/20/EC, DIN 74085, AS/NZS 4968-1:2003.

# JSK37 Sensor Coupling

## Features

- Safety solution with remote dash display
- Road-Train rated – 190kN
- JSK37C 3 point sensor with dash display
- Connections sensor, king pin sensor and coupling height sensor.
- Integrated dash display available (truck specific)
- Extended handle for easy operation
- Optional lubetronic technology.
- Greaseable and greaseless options available

# Sensor Coupling

- A** = sensor for connection status  
**B** = sensor for king pin  
**C** = sensor for coupling height

**Cast coupling  
JSK37**

## Advantages at a glance

- Sensors provide best possible safety during the coupling process
- Increased safety even in poor visibility
- A remote display processes the signal and displays it in the driver's cab

## Technical Features

- A sensor permanently monitors the connection status
- A second sensor controls the position of the king pin
- An additional third sensor monitors the contact locking position and displays it in the driver's cab.
- The sensors are located in protected zones on non-moving parts
- Electromagnetical compatibility according to highest standards
- Also suitable for use in the transport of dangerous goods (ADR)

Refer to JSK37CZ and JSK37CZW for parts breakdown.

# JSK37027 Roll Back Application

## Applications: Fridge van Roll back application Tipper Work

Low maintenance fifth wheel coupling:

- maintenance free top plate
- maintenance free rubber cushioned pivot bearings
- maintenance free wear ring
- only one remaining grease point the lock jaw (little grease required)

Lock jaw and wear ring can be replaced without difficulty in a few minutes with the fifth wheel still in position.

Mounting must be carried out in accordance with our instructions.

Pneumatic operation

Also available in low profile ball race assembly

# DR37E Cast Top Stabilised Fifth Wheel Assembly 2"

## Application: Highway work Tipper work

also available with:

16mm Base Plate	DR37E 16mm
20mm Base Plate	DR37E 20mm

\*Note thicker base plate determines extra weight

\*\*Note only available on weld on feet

D-Value	190 kN
Overall height	268 mm
Imposed load	20000 kgs
Gross comb. weight	135000 kgs
Weight approx. (for 12mm base plate)	394 kgs
Complies with ADR 62, 63	
CRN	24840

## Twin lockouts.

Flush bolt heads on mounting plate in chassis mounting zone. Wearing ring easily removed from above on JSK37E fifth wheel.

## Spare parts for DR37E Cast Top

# Easy Connect

## Fast, simple, secure

**Coupling and uncoupling without the need to raise or lower the unit**

- Fast and easy attachment and disconnection of pneumatic and power cables.
- Access from side of vehicle to alleviate OH & S issues
- Easy Connect is universal and directly fits most trailer models
- Prevents damage to spiral connections (suzies, see illustration below)

**Part No: SKE0105000000**

# Heavy Duty Fifth Wheel Couplings

## 3½" and 2"

## Locking Device

locked

hole to use when  
locking open the  
operating handling when  
exchanging lock jaw

set for coupling

## Type of Mounting

### JSK38G cardan mounting

- wear resistant bushes
- lateral movement up to a max. of 7° for off road operation.
- lateral movement can be limited to approx. 0° for highway operation.

### JSK38C, JSK39C, JSK38DV Rubber mounting

- shock absorbing by large rubber pads slack and maintenance free
- Oil and grease resistant

# Operating and Maintenance Instructions for JOST Fifth Wheel Couplings

## Types JSK38C, JSK38DV, JSK38G, JSK39C, JSK50 and JSK52

## Operating instructions

The outfit should be parked on a flat and even road surface.

### Coupling-up:

1. The fifth wheel must be in the reset position, i.e. the end of the operating handle standing out approx. 300 mm otherwise: Raise secondary safety latch' (A) and move handle forward to unlock (B). Pull handle to end position (C).
2. Skid plate of semi trailer should be approx. 50 mm lower than the top of the fifth wheel.  
**IMPORTANT:** Loss of pressure in the air suspension of the trailer can alter the height of the king pin.
3. Reverse tractor - the mechanism locks automatically.
4. Check that the skid plate is resting on the fifth wheel plate with no gap between the two.
5. Ensure secondary safety latch is engaged.

### Un-coupling:

1. Raise secondary safety latch (A). Move handle forward to unlock (B). Pull handle to end position (C).
2. Drive tractor away. The fifth wheel mechanism will automatically assume the coupling-up position (D).

### Lateral movement on type JSK38G

The lateral movement should only be engaged for off-road use. On the road, and especially at higher speeds, it must be blocked for safety reasons.

#### To set the lateral movement: For normal road Use:

1. Release the hex bolts (2 each side - width over flats 19 mm).
2. Push both blocks into the end of the oblong hole.
3. Re-tighten hex bolts (torque 80 Nm).

#### For off-road use:

1. Release the hex bolts (2 each side - width over flats 19 mm).
2. Pull both blocks out to the end of the oblong hole.
3. Re-tighten the hex bolts (torque 80 Nm).

## Maintenance instructions:

1. Uncouple semi-trailer at least once a week, certainly after more than 5000 km. Clean semi-trailer skid plate and fifth wheel plate. Lubricate fifth wheel plate, locking mechanism, fifth wheel throat and king pin, with heavy duty grease. We recommend the use of high pressure grease (EP) with MoS2 or graphite additive, for example BP L21, M, BP HTEP 1, BP LS 2, Esso universal grease M, Shell Retinax AM. Check operating handle and release lever pivots for free movement - clean and lubricate.
2. The bearings of the lock lever (item 28) and of the pedestals of the JSK38 G-1 and the pivot bearing of the JSK50 are to be regreased through grease nipples provided at each maintenance interval. The rubber cushions of the JSK38 C-1 are maintenance free. According to operating conditions we recommend checking parts for wear at 50,000 and 100,000 km distance driven.

## JSK38DV90 - Rubber Bearing

A heavy duty fifth wheel coupling for operation under arduous conditions.

Increased load (up to 28,000kg). With rubber bearing (model "C"): rubber cushions are shock- absorbent and maintenance-free.

### Technical specification:

Rubber bearing

The fifth wheel coupling complies with the directives/standards as per 94/20/EC - Class S, DIN 74084 and ISO 3842. Suitable for 3,5" (90) king pins as per 94/20/EC, DIN 74083 and ISO 4086. Fitted on a mounting plate.

Imposed weight	28,000 kg
D-value	260 kN
Weight	204 kg
CRN	36688

# JSK38C1 / JSK38C2" - Rubber Mounting Interchangeable fifth wheel

A heavy duty fifth wheel coupling for operation under arduous conditions.

The well known **JOST** locking device together with the maintenance free rubber cushions ensures a high degree of stability and safety on the road.

This fifth wheel is available for use with 3½" and 2" king pins.

The conversion of a 3½" or 2" locking mechanism or vice versa can easily be carried out with standard tools, without removing the fifth wheel coupling from the truck.

# JSK38G1 / JSK38G2" – Cardan Mounting

with mounting pattern according to DIN 74 081 and 74 084

A heavy duty fifth wheel coupling for operation under arduous conditions.

The well known **JOST** locking device together with the maintenance free cardan mounting ensures a high degree of stability and safety on the road and off road.

The lateral movement of 7° can be reduced to 0° for normal road operation.

This fifth wheel is available for use with 3½" & 2" king pins.

The conversion of 2" & 3½" locking mechanism or vice versa can easily be carried out with standard tools, without removing the fifth wheel coupling from the tractive unit. Suitable for all types of rear axle steering systems.

# JSK39CS & JSK39CSW – Rubber Mounting Fifth Wheel coupling with wear steel top plate

Suitable for 3½" king pins. Greaseless option available

## Heavy duty Applications:

Mining  
Stock crate  
Fridge van  
Forestry  
Off road

Suitable for 3½" king pins

D-Value	275 kN
Overall height	190 mm
	160 mm
	250 mm
Imposed load	26000 kgs
Weight approx.	232 kgs
CRN	45375

In accordance with the standards:  
ISO3842, DIN 74081

## Features

A heavy duty fifth wheel coupling for operation under arduous conditions.

Removable wear plates, bolted to the top plate, allowing an easier and cheaper maintenance. Also available in greaseless. Manual adjustment for the locking mechanism to extend the life cycle.

Rubber cushions pad mount. High reliability in the locking mechanism.

Mounting must be carried out in accordance with our instructions.

The right to alter specifications is reserved.

# LP39CS & 39CSW

## Low Profile Stabilised Fifth Wheel Assembly

Suitable for 3½" king pins. Greaseless option available

### Heavy duty

**Applications:** Stock crate  
Fridge van  
General freight  
Tankers

Standard with 16 mm base plate  
optional: 20 mm base plate  
LP39C 20mm

\*Note thicker base plate determines extra weight and height.

D-Value	
JSK39CS, CSW	240 kN
Imposed load	24000 kgs
Weight approx.	425 kgs
(for 16mm base plate)	
CRN	47151

### Twin lockouts.

Flush bolt heads on mounting plate in chassis mounting zone. Cast type unit equipped with JSK39 CS fifth wheel extra heavy duty unit. Mounting must be carried out in accordance with our instructions.

## Spare parts for LP39CS &amp; LP39CS

# JSK52 – Heavy Duty Fifth Wheel Coupling 3½" for extreme applications

A heavy duty fifth wheel coupling for operation under arduous conditions.

Increased load (up to 75,000kg).

With pivot bearing weld on pedestals.

## Technical specification:

### Pin and bush

The fifth wheel coupling complies with the directives/ standards as per 94/20/EC – Class S, DIN 74084 and ISO 3842. Suitable for 3.5" (90) king pins as per 94/20/EC, DIN 74083 and ISO 4086. Fitted on a mounting plate.

Imposed weight	75,000 kg
D-value	400 kN
Weight	450 kg
CRN	46422

# Mounting Plates

## Mounting height 16mm and 20mm

For fifth wheel couplings with mounting pattern according to DIN 74084, for example JSK38C1 and JSK38G1

### MP0118

**Weight approx. 94kg**

Drilling pattern according to DIN standard 74084 and ISO 3842

### MP0118/JSK38

(use for JSK38 with 160mm pedestals)

**Weight approx. 90kg**

Drilling pattern according to DIN standard 74084 and ISO 3842

### MP0119

**Weight approx. 120kg**

Drilling pattern according to DIN standard 74084 and ISO 3842

The mounting plates are suitable for all types of semi-trailers with rear axle steering systems.

Suitable for fifth wheel couplings up to 290 mm mounting height.

Imposed load  
D-Value

36000 kgs  
260 kN

For fifth wheel couplings with **JOIST** mounting pattern according to **JOIST** standard type JSK38C and JSK38G.

## Mounting example

## Mounting instructions

When mounting the fifth wheel according to DIN 74084 on to a **JOST** mounting plate use 12 bolts M 16, preferably M 16 × 1,5 grade at least 8.8, respectively M 20, preferably M 20 × 1,5 for JSK38C1 and JSK38G1.

To fix the mounting plate on to the vehicle chassis at least 6 bolts M 16 × 1,5, preferably M 16 × 1,5, grade at least 8.8 respectively 4 × 20, preferably M 20 × 1,5 are required on each side.

To ease the shear load on the mounting bolts stop blocks should be welded to both sides of the pedestals and to the front and rear of the mounting plate. The fifth wheel plate must

be able to move freely and must touch neither the mounting plate nor the chassis or subframe.

The mounting instructions of the truck manufacturers and—if applicable—existing legal regulations must be adhered to. The bolts must be checked for tightness.

**JOST** 'Mounting instructions for 2" fifth wheel couplings' must be strictly adhered to. Fit fifth wheel in accordance to AS/NZS 4968.2:2003 "Installation of fifth wheel and turntable assemblies".

# Mounting Height 40mm

For fifth wheel couplings with mounting pattern according to DIN 74084,  
for example JSK38C1 and JSK38G1

## MP4126

**Weight approx. 81kg**

Drilling pattern according to  
DIN standard 74084 and ISO 3842

The mounting plates are suitable for all types of semi-trailers  
with rear axle steering systems.

Suitable for fifth wheel couplings up to 290 mm mounting  
height.

Imposed load	36000 kg
D-value	260 kN

For fifth wheel couplings with **JOIST** mounting pattern  
according to **JOIST** standard type JSK38C and JSK38G

## Mounting example – MP4126

## Mounting instructions

When mounting the fifth wheel according to DIN standard 74084 onto a **JOST** mounting plate use 12 bolts M 16 preferably M 16 × 1,5 grade at least 8.8 respectively M 20 preferably M 20 × 1,5 for JSK38C and JSK38G.

To fix the mounting plate on to the vehicle chassis at least 6 bolts M 16, preferably M 16 × 1,5, grade at least 8.8 respectively 4 × M 20, preferably M 20 × 1,5 are required on each side.

To ease the shear load on the mounting bolts stop blocks should be welded to both sides of the pedestals and to the front and rear of the mounting plate.

The fifth wheel plate must be able to move freely and must touch neither the mounting plate nor the chassis or subframe.

The mounting instructions of the truck manufacturers and—if applicable—existing legal regulations must be adhered to. The bolts must be checked for tightness.

**JOST** 'Mounting instructions for 2" fifth wheel couplings' must be strictly adhered to. Fit fifth wheel in accordance to AS/NZS 4968.2:2003 "Installation of fifth wheel and turntable assemblies".

# Mounting Plate Summary for Heavy Duty Fifth Wheel Couplings up to 36000kg Imposed Load

## JSK 38C Height Variations – Type MP0118

# Sliders for Fifth Wheel Couplings

# JSKSL Slider Fifthwheel

## Standard and XXL

### Multi-purpose

- Fifth wheel coupling position freely adjustable in 50mm steps
  - optimum shaft load and load distribution
  - total traction length setting
- Various heights available on request
- Can be attached to all standard vehicle types
- Equipped with the tried and tested fifth wheel couplings JSK37E, JSK37EW

### Easy Mounting and operation

- All standard customer hole patterns available ex works
- Easy to mount with a hexagonal bolt
- Base plate to suit European or North American spec chassis

### Lightweight, compact and robust

- 25% lighter than its predecessors
- Greater degree of travel with smaller external dimensions
- Cathodic electrophoretic painting for optimum anti corrosion

### Top safety standards

- Self-locking mechanism, protected against accidental opening
- Elbow lever principle for greater locking force
- Fourfold, interlocking lock between the carriage and slider frame
- Forged gear tooth rows
- Cast pedestals

# JSK37EVM Manual Slider Assembly

All normal fifth wheel couplings can be mounted on the sliding device. Standard mounting holes for the fifth wheel coupling according to DIN standard 74081 and ISO 3842 are provided.

Imposed Load	18,000 kg
Weight approx. (without fifth wheel)	180-440 kg
D-value	190 kN
CRN	26169

## For use with JSK37CZ/150

Base plate to suit European or North American spec

The above loads apply to operation on ordinary roads and ordinary operating conditions as they are to be found in Europe. If the fifth wheels are being operated in other territories or under other conditions we would ask you to contact us regarding the type of fifth wheel to be used.

The right to alter specifications is reserved.

# Ballrace Slider – Fifth Wheel System

## Base Assembly - EVPLP Slider LT

Fifth Wheel - JSK37CZ150

- Over 100 kgs lighter than other available products.
- 735 mm of travel.
- Total overall height including the fifth wheel of 307 or 319 mm.
- Total length of 2060 mm.
- Weight: 435-625 kg approx.
- Pneumatically operated.
- CRN's 24836 and 26170 apply.
- Supplied as standard with the proven tried and tested JSK37CZ Fifth Wheel - "The Industry Standard".
- Manufactured using only genuine **JOST** components.
- Imposed Load of 20,000 kgs.
- Will suit all North American and European chassis widths and A-trailers.

# 2" and 3½" King Pins

Refer to Jost website [www.jostaustralia.com.au](http://www.jostaustralia.com.au)  
for installation and operation instructions.

# Technical Circular **JOST** King Pins – Bolt Torque

Until recently precise torque wrenches were not commonly available in workshops and garages. Because of this **JOST** prescribed only torque settings which could not damage the bolts.

The existing torque settings have proven themselves in numerous independent bench tests and in millions of miles of daily use, subject to our installation and maintenance instructions being adhered to.

Nowadays the trailer manufacturers and workshops are using more precise torque wrenches, which are regularly calibrated. This is the prerequisite for a higher torque setting, without the danger of the bolt being damaged. The increase in torque will result in an optimum initial stressing force of the bolt.

The new torque setting will enable the maintenance period to be increased to max. 50,000km resp. six months in line with that of the fifth wheel. The conditions of usage and the instructions of the trailer builders must however be observed.

## New JOST Torque Settings:

Part no.	Bolt Size	Torque Nm	King pin type
KZE101203	M14 × 35	190 <sup>±10</sup>	KZ10081012, KZ1410, KZ1412
KZE141603	M16 × 45	280 <sup>±15</sup>	KZ1416, KZ2816
KZE101606	M20 × 50	500 <sup>±30</sup>	KZ1016, KZ1516

# King Pin 3½" – Access from underneath

# King Pin Lock for 2" King Pins

Low weight, handy, safe. For all 2" king pins. Completely protects not only the 2" neck, but all mounting bolts. Corrosion-resistant.

Cylinder lock of high quality, dust and water proof. Locking with normal or master keys possible.

Part number: DS2000

## Spare Parts for DS2000

Fig.	Description	Part No.
1	King pin lock, complete	DS2000
2	Cylinder lock with 2 keys	DS100003

When reordering keys or cylinder locks for locking systems having same keys, please state code number.

## Wear Limit Gauge King Pin Gauge

Above item is designed as a NO GO wear limit indicator, for either 50mm or 90mm king pins.

Once king pin can pass through gauge the king pin must be replaced. Also designed to check king pin protrusion.

**Part number:** JOSTGAUGEKINGPIN

# Telescopic Landing Gear

# Landing gear Modul

The Modul series of telescopic landing gear is extremely versatile. Thanks to its modular construction with variable mounting and operating heights, various crank handles and connection shaft lengths, plus five different foot types, all client requirements can be met.

Modul B is optimised standard telescopic landing gear. The Modul C range consists of various landing gears which are designed for special applications.

Both ranges offer convincing product advantages: the integrated gearbox has optimum protection, and requires minimum force to be applied on the crank handle in both directions. At the same time, Modul offers an extraordinary increase in lift of up to 120 mm combined with smaller dimensions for fitting. It goes without saying that the telescopic landing gear is extremely sturdy and complies with the strict AAR standard.

The landing gear is not a standalone, functional device. It is designed to be mounted on a trailer. The vehicle may not be operated until it has been ensured that the towed vehicle with the support complies with the applicable national road traffic regulations. In Germany, the relevant "TÜV" Safety Regulations and "StVZO" Motor Vehicle Safety Standards are to be observed. The telescopic landing gear is always to be used in conjunction with the instructions for use issued by the manufacturer of the relevant trailer.

## Tried-and-tested Modul system

Since the market entrance Modul landing gears are setting benchmarks. The modular construction allows a multitude of different varieties.

- Easy to assemble and replace foot system
- Greatest flexibility of installation thanks to a range of back plates
- Various crank handles and connection shaft lengths
- Significant gain in lifting force compared to comparable products
- Attractive design
- For universal application
- Type reduction thanks to modular system guarantees high level of flexibility in spare parts business

## Patented Modul drive

The patented drive is perfectly protected by the internal construction. In addition it offers various advantages in daily use:

- Easy to change between high and low gears
- Very compact construction with high efficiency and extremely low wear
- Large lifting force per turn of the crank with low crank force allows easy and convenient operation
- Reliably secured against run-down
- Maintenance-free

## Support feet

The Modul series of telescopic landing gear are available with a range of different feet: S, A, T and TC foot.

Foot-S  
(Standard)

Foot-A  
(Rocking foot)

Foot-TC  
(Flat sand shoe)

Foot-T  
(Sand shoe)

## Additional advantages

### Outstanding corrosion protection

Landing gears from JOST are especially sturdy and resist also unfavorable exterior conditions.

- Careful pre-treatment
- Premium surface through powder coating
- Long-lasting protection against environmental influences and stone chips

### Easy maintenance

The Modul landing gears are equipped with a long-term lubrication. Therefore they can be used three years without relubrication.

- Long-lasting, maintenance-free drive
- No need for subsequent lubrication of our premium stabilisation and aluminium telescopic landing gears with lubrication tube

Lubrication tube

### Tested and developed according to internationally recognized standards

- Regular inspection during series production based on the strict AAR standard
- Quality management in accordance with ISO/TS 16949
- Environmental management in accordance with ISO 14001
- **3 year guarantee**

### Top service

Locations worldwide and a broad network of dealers ensure qualified support.

- Competent and individual advice from Sales and Customer Service
- Support for our customers using CAD data during the planning phase
- High level of prevalence and global spare parts supply with short delivery times
- Easy to repair, such as using our foot replacement system

# Modul

## Flexibility due to a modular ordering system

The ordering system allows clients to choose and put together a set of legs to suit their needs.

# Mounting and maintenance instructions

## Mounting instructions

Before mounting, both jacks must be in retracted position, in order to take advantage of the total stroke after mounting connection shaft and to avoid premature ground touch of one jack. Otherwise one single jack would have to carry the total load, causing damage.

The jacks must be mounted parallel and properly aligned, otherwise the connection shaft could tilt and make the landing gear hard to operate.

Fitting and bracing should be carried out as shown below.

The introduction of air suspension on semi-trailers has resulted in an increase of related problems.

When the semi-trailer has been standing for a considerable time a loss of air in the suspension is liable to occur, causing the rear part of the trailer to sink down.

This in turn results in an angular movement of the axle, forcing the trailer in the direction of travel if the brakes are on. This movement depends on the type of air suspension, the spring deflection and the size of the tyres.

The larger the drift and the greater the force the greater is the chance of the landing gear being subjected to a force with which it cannot cope, ultimately resulting in it being bent. This damage is a secondary consequence of the loss of air.

This can be avoided by using landing gear with drift compensation.

The **JOST** "A" foot is a semi-wheel which is able to compensate for the entire movement of the trailer and remove the force of drift from the landing gear.

A paved surface is essential for the correct function of this version.

A further variation is the **JOST** "S" foot. The large sand shoe cannot sink in and can therefore also be used on an unpaved surface.

## Operating instructions

### Uncoupling:

1. Block wheels of semi-trailer.
2. Unlock and engage crank handle.
3. Wind down landing gear in high gear until ground is touched.
4. Shift to low gear position by pushing the crank handle towards the gear box for MODUL legs, pull the crank handle out to select low gear for A400 and E110 legs and lift to necessary height.

**Caution:** Stop cranking when end of travel is reached.

### Coupling-up:

1. After locking the fifth wheel wind-in landing gear in low gear until inner leg has left the ground.
2. Shift to high gear by pulling the crank handle and wind-in inner leg.

**Caution:** Stop cranking when end of travel is reached.

3. Fasten crank handle in holder, making sure that high gear is still engaged.

## Maintenance instructions

The landing gear received adequate initial lubrication during manufacture. Relubrication is possible through grease nipples provided.

The spindle is lubricated with BP grease JS12 by the lower of the two grease nipples located on the side of the housing. Prior to lubrication wind down the landing leg as far as possible and during lubrication slowly wind it up. For subsequent lubrication of the other greasing points we recommend the use of high pressure grease (EP) with MoS, or graphite additive, for example:

**BP L2 1M**  
**BP HT-EP 1**  
**BP JSS2**  
**Esso universal grease M**  
**Shell Retinax AM**

When inspecting the trailer, all parts which are subject to wear must be checked and replaced if necessary.

These instructions are based on normal conditions of use. In the case of difficult operating conditions the maintenance and lubrication intervals must be reduced accordingly.

65	57	125

# Towing eyes 50 mm

## ROE57272

Towing eyes according to DIN 74053 pressed-in replaceable towing eye sleeve 50 mm inner diameter

Part no.	<b>ROE57272</b>
Material:	heat-treated steel St 52-3
D-value:	191 kN
Weight:	10.3 kgs
Down Load:	1000 kgs
CRN:	41941

H	B	L
65	60	170

## ROE57005 c/w solid bush

Part no.	<b>ROE57005</b>
Material:	heat-treated steel St 52-3
D-value:	314kN
Weight:	13.4 kgs
Down Load:	1000 kgs

D-value is reduced to 190kN with 100 kgs down load.

CRN:	49663
------	-------

# Towing eyes 50mm - Replaceable Toweye

## JOST 57254

Part no: **JOST 57254**  
D-Value: 260 kN  
Weight: 18,5 kg  
CRN: 42292

## Spare parts for towing eyes JOST 57254

Fig.	Description	Part No.

06	Solid Bush	JOST 53362

# Towing eyes

**Part no.** **BPCBDB1394**  
**Model:** 45-Ton Forged Heavy Duty Towing Eye  
**Description:** Finished with black powder coat for superior durability and corrosion resistance.  
**D-Value:** 165kn  
**CRN:** 37264  
**Dimensions:** 3" I.D. with 1.62" section drawbar with 4 hole square mounting plate.

**Part no:** **JOST0063126**  
**Model** 76mm Demountable Pintle Eye  
**D Value** 125kN  
**V Value** 7 Tonne  
**ATM** 25 Tonne  
**CRN** 41615  
**Eye Dimension** 76.5mm  
**Shank Dimension** 50mm  
**Block Dimension** 90x90x150mm  
**Total length** 435mm

# JOST Tow Eye Lock

## Features:

1. 10mm thick top and bottom plate, case hardened.
2. No padlock, uses highly developed Super Lock Bolt, 25.4mm diameter, case hardened body. Anti drill centre pin, 10 pin radial pin tumbler lock insert with over 1 million possible key combinations.
3. Easy to operate, only the lock bolt needs to be removed to unlock trailer.
4. Lock bolt can only be locked/unlocked using key, no accidental locking possible.
5. Dust cap provided to prevent ingress of dust and dirt into lock.
6. Finished in highly visible, yellow powder coating.
7. 2 keys supplied with lock as standard. Multiple locks can be supplied with same key for fleet or multi user applications.
8. Independantly tested and approved by SCM. Approval No. MP030417.

Model	Dimension 'A'	Dimension 'B'	Weight
SA12 Eye Lock	51mm	95mm	5.0kg

# Welding instructions recommended for Rockinger Drawbar Eyes

1. **Rockinger** drawbar eyes are provided for welding into the drawbar by electric arc welding, preferably done under a protective gas shield.
2. The steel of the drawbar has to be weldable, e.g. made of St 37-2 or St 52-3 or any other compatible weldable steel with a carbon content of less than 0.22%.
3. Remove all paint, grease and rust from welding surfaces. Heating up of drawbar eye to 200 - 250°C before beginning to weld is recommended.
4. The drawbar eye must not be welded within a length of \*mm measured from the middle of the drawbar eye access towards the back. This part should protrude out of the drawbar.
5. The welding should be exercised in one seam at a time only, in order to avoid overheating the surrounding space of the welding seam.
6. Carry the welding onwards to the direction of the drawbar eye access in one procedure.
7. All seams have to be layed in longitudinal direction of the drawbar eye's shaft. Never and by no means crosswire.
8. Each seam of welding should be set one by one diagonally opposite to the last one, so you maintain an even radiation of heat.
9. Cooling down of the welding should take place where the air is still; do not immerse into water or pour water over it.
10. If wanted, you can place slot welds through the lateral surface of the drawbar's sectional steel. This is in order to fix the drawbar shaft to the drawbar additionally.
11. The thickness of the welding seams is to be approximately 8mm in full V- shape or half V-shape.
12. The thickness of the sectional connecting bars should be atleast 8mm, better from 10mm - 12mm.

## Drawbar eyes:

57268DIN	65 × 55	Ø 40mm = 210mm
57262DIN	50 × 40	Ø 40mm = 210mm
57260DIN	40 × 40	Ø 40mm = 210mm
57272DIN + ISO	65 × 60	Ø 50mm = 210mm
57254 <b>Rockinger</b> for 56, 561 and 702		Ø 50mm = 195mm
57006 ring 41 strong, NATO		Ø 76mm = 180mm

# Couplings and drawbar eyes

## Coupling and drawbar eye size

- Hole pattern in the crossbar of the towing vehicle
- Hole pattern in the coupling flange
- Pin size of the coupling

## Characteristic values

- Values of the coupling
- Values of towing vehicle and trailer (see vehicle registration certificate)
- Values of the drawbar eye

## Truck and trailer: D-value

- Theoretical horizontal force between towing vehicle and trailer
- The D-value can only be calculated with the permissible total weight of both truck and trailer.
- Calculation of the D-value [kN] with formula 1 (F1):

**T** : Total weight of the towing vehicle in t  
**R** : total weight of the drawbar trailer in t  
**g** : Gravitation acceleration 9,81 m/s<sup>2</sup>

The calculated D-value can be equal to or lower than the D-value of the coupling and of the drawbar eye.

In case of mounting on a trailer is permitted use formula 2 (F2):

**R1** : Total weight of trailer where the coupling is mounted  
 (max. 24 t)  $R1 \geq R2$

$$F1 \rightarrow D \text{ (kN)} = g \cdot \frac{T \cdot R}{T + R}$$

$$F2 \rightarrow D \text{ (kN)} = g \cdot \frac{R_1 \cdot R_2}{R_1 + R_2}$$

## Towing vehicle and central-axle trailer: Dc-value (Valid only in connection with the V-value)

- Theoretical horizontal force between towing vehicle and trailer
- The Dc-value can only be calculated with the permissible total weight of both towing vehicle and central-axle trailer.
- Calculation of the Dc-value with formula 3 (F3):

**T** : Total weight of the towing vehicle in t  
**C** : Sum of the axle loads of the central-axle trailer in t  
**g** : Gravitation acceleration 9,81 m/s<sup>2</sup>

The calculated Dc-value can be equal to or lower than the Dc-value of the coupling and of the drawbar eye.

$$F3 \rightarrow Dc \text{ (kN)} = g \cdot \frac{T \cdot C}{T + C}$$

### Central-axle trailer: V-value (Valid only in connection with the Dc-value)

- Vertical force for central-axle trailer
- Dependent on the rear axle suspension of the towing vehicle.
- Calculation of the V-value [kN] with formula 4 (F4):
  - a** : An equivalent verticle acceleration in the coupling point in m/s<sup>2</sup> (a = 1, 8 for vehicles with air suspension/ a = 2, 4 for vehicles with other suspensions)
  - l** : Theoretical drawbar length in meters
  - x** : Length of the loading area in meters ( $x^2/l^2$  : atleast 1, 0)
  - C** : Sum of the axle loads of the central-axle trailer in t

$$F4 \rightarrow V \text{ (kN)} = a \cdot \frac{x^2}{l^2} \cdot C$$

The calculated V-value can be equal to or lower than the V-value of the coupling and of the draw- bar eye.

### Central-axle trailer: Static vertical load (Valid only in connection with the V-value)

- Vertical load of the central-axle trailer on the coupling point.
- The vertical load depends on the size of the coupling and the maximum is 10% of the gross weight of the trailer or 1000kg (whichever is less).
- When using a central-axle trailer the vertical load should amount to at 4% of the trailer weight in order to prevent increased wear caused by bouncing of the drawbar eye.

# Rigid mounted pintle hooks

## BPCBH850MM (8 Ton)

### Capacity

3,000 lbs. maximum vertical load  
16,000 lbs. M.G.T.W.

### Description

Drop forged combination pintle hook/ball hitch. Forged steel ball. Interchangeable hitch balls. Finished with black powder coat for durability and corrosion resistance.

### Drawbar Eye Dimensions

2½" to 3" up to 1⅞" cross section.

Hitches are shipped with drilling template, capacity decal, and are individually boxed.

Weight	13 lbs
CRN	37265

## BPCP45AC4 & BPCPAC4BK (45 Ton) - BPCP45AC6 & BPCPAC6BK (45 Ton)

Buyers Pintle Hooks feature a "double-safe" locking system with a lock/ clasp/impact arm interacting design that combine to prevent release of the eye when air pressure is applied. The Air Compensated Pintle Hooks must be used with a brake chamber.

The air brake chamber is constructed to interact with the closed clasp to prevent uncoupling when air is applied.

P45AC4 is to be used with a lunette eye having an internal diameter between 2⅞" and 3", and a material cross section between 1¼" and 1¾" in diameter.

P45AC6 is to be used with a lunette eye having an internal diameter between 2⅞" and 2⅝", and a material cross section between 1⅝" and 1¾" in diameter.

Weight: BPC P 45 AC4	26lbs
Weight: BPC P 45 AC4BK	3.2lbs
CRN	37266

# Rigid mounted pintle hooks

## BPCPH15WMK (15 Ton)

### Capacity

6,000 lbs. maximum vertical load  
30,000 lbs. M.G.T.W.

### Description

Drop forged alloy steel rigid type pintle hook.  
Finished with black powder coat for superior durability and corrosion resistance.

### Drawbar Eye Dimensions

2" to 3" I.D. with 1 1/4" to 1 5/8" diameter section.  
Pintle hooks are individually boxed and include mounting information sheet, spec. sheet, adhesive backed drilling template, and vehicle capacity decal.

Weight	11.75lbs
CRN	37267

## BPCPH20WMK (20 Ton)

### Capacity

8,000 lbs. maximum vertical load  
40,000 lbs. M.G.T.W.

### Description

Drop forged alloy steel rigid type pintle hook.  
Finished with black powder coat for superior durability and corrosion resistance.

### Drawbar Eye Dimensions

2" to 3" I.D. with 1 1/4" to 1 5/8" diameter section.  
Pintle hooks are individually boxed and include mounting instructions, specifications sheet, adhesive backed drilling template, and vehicle capacity decal.

Weight	13.3lbs
CRN	37268

# Rigid mounted pintle hooks

## BPCPH30 (Ton)

### Capacity

15,000 lbs. maximum vertical load  
60,000 lbs. M.G.T.W.

### Description

Drop forged alloy steel rigid type pintle hook.  
Designed for ease of use, long life and corrosion resistance.

### Drawbar Eye Dimensions

2" to 3" I.D. with 1¼" to 1½" diameter section.  
Pintle hooks are individually boxed and include mounting instructions, specification sheet, adhesive backed drilling template and vehicle capacity decal.

Weight 24lbs  
CRN 44894

Fig. 1

## BPCPH50AC

### Capacity

20,000 lbs. maximum vertical load  
100,000 lbs. M.G.T.W.

### Description

50 Ton air compensated pintle hook reduces wear and absorbs shock in heavy duty towing situation.

### Drawbar Eye Dimensions

2.38" to 3" I.D. with 1¼" to 1½" diameter section.  
Pintle hooks are individually boxed and include mounting instructions, specification sheet, adhesive backed drilling template and vehicle capacity decal.

Weight 44.8lbs  
CRN 45107

# Pintle Hook Mount

**Part Number:** BPCPM87

**Capacity:**

2800lb: maximum vertical load  
14000lb :M.G.T.W.

**Description:**

Pintle Hook 8 hole mount

**Weight:**

15lb

**Part Number:** BPCPM84

**Capacity:**

4000lb: maximum vertical load  
20000lb :M.G.T.W.

**Description:**

Pintle Hook 4 hole mount

**Weight:**

12lb

# Choice of the coupling / calculation

## Choice of the coupling

### tractor bearing of the coupling

- |     |   |                    |   |
|-----|---|--------------------|---|
| 1.  |  | flange bearing     | 1. Hole pattern at rear tractor:<br>coupling with flange bearing and corresponding hole pattern         |
| 2.1 |  | lift bearing       | 2. Coupling holder of tractor<br>2.1 Coupling with lift bearing<br>2.2 Coupling with insert pin bearing |
| 2.2 |  | insert pin bearing |   |

## Calculation

### 1. total vehicle combination weight

Admissible total vehicle combination weight:  
currently 40t.

### 2. towed load

In absence of D-value specification:

Admissible total vehicle combination weight (currently 40t)  
minus admissible total weight of tractor

### 3. D-value

**D-value** (not for all couplings)

Theoretical horizontal force between towing vehicle and trailer; comparative mathematical value of forces between moving masses.

The D-value can only be calculated with the permissible total weight of both truck and trailer.

Calculation of the D-value (kN):

$$D = g \cdot \frac{T \cdot R}{T + R}$$

**T** : total weight of the towing vehicle in t

**R** : total weight of the turnable trailer in t

**g** : gravitation acceleration (9,81 m/s<sup>2</sup>)

The calculated D-value can be equal to or lower than the D-value

$$D = g \cdot \frac{R_1 \cdot R_2}{R_1 + R_2}$$

**R1** : total weight of trailer where the coupling is mounted (in t)

**R1** ≥ **R2**

### 3. Static verticle load

- vertical load of the central-axle trailer on the coupling point
- The vertical load depends on the size of the coupling and the maximum is 10% of the gross weight of the trailer or 1000kg (whichever is less).
- When using a central-axle trailer the vertical load should amount to at 4% of the trailer weight in order to increased wear caused by bouncing of the drawbar eye.
- Size of static vertical load is also a function of speed.

### Central-axle trailer (C):

Use admissible in principle:

- size of central-axle trailer depends on characteristics of drawbar eye and tractor unit
- please see table for restrictions

# Choice of the coupling / calculation

## Drawbar eye

Couplings and drawbar eyes for the road traffic which have been verified according to european standard specification 94/20 have special fixed identifying sizes, the Dc-value and the V-value, for the operation with the central-axle trailer.

These values are not of importance in the agriculture and forestry. Since the Dc-value and the V-value are indicated with some of the following mentioned drawbar eyes, these sizes are briefly explained.

### Towing vehicle and central-axle trailer

#### Dc-value

(valid only in connection with the V-value)

- theoretical horizontal force between towing vehicle and trailer.
- The Dc-value can only be calculated with the permissible total weight of both towing vehicle and central-axle trailer.

- Calculation of the Dc-value (kN):

$$D \text{ (kN)} = g \cdot \frac{T \cdot C}{T + C}$$

**T** : total weight of the towing vehicle in t

**C** : sum of the axle loads of the central-axle trailer.

**g** : gravitation acceleration 9,81 m/s<sup>2</sup>

The calculated Dc-value can be **equal to or lower than** the Dc-value of the drawbar eye.

### Central-axle trailer:

#### V-value

(valid only in connection with the Dc-value)

- vertical force for central-axle trailer.
- dependent on the **rear axle suspension of the towing vehicle**

- Calculation of the V-value (kN):

$$V \text{ (kN)} = a \cdot \frac{x_2}{l_2} \cdot C$$

**a** : an equivalent vertical acceleration in the coupling point in m/s<sup>2</sup>

a = 1,8 for vehicles with air suspension

a = 2,4 for vehicles with other suspensions l: theoretical drawbar length in meters

**x** : length of the loading area in meters x<sup>2</sup> / l<sup>2</sup>: atleast 1,0

**C** : sum of the axle loads of the central-axle trailer in t

The calculated V-value can be equal to or lower than the V-value of the drawbar eye.

# Hubodometer and Hub Caps

# Hubodometer for all tyres sizes

**JOST HUBODOMETER** is a precision instrument for all kinds of wheeled vehicles, e.g. semi-trailers trailers low-bed trailers buses trains and other equipment.

**JOST HUBODOMETER** will record information for maintenance schedules wear and tear controls mileage of leasing vehicles exact data for calculation of transport costs validating guarantees

## Smallest dimension

Overall depth only 23 mm

## Mounting

Directly to the wheel cap or shockproof mounting in a special wheel cap

## Recording mechanism

Completely and permanently sealed. Filled with inert gas against fogging and ingress of moisture or dirt. Records forward and reverse motion. Completely tamperproof.

Records up to one million miles. Records in kilometres or miles. All parts corrosion resistant.

Weight: 0.24 kg

3 Year or 500,000kms warranty, whichever comes first.

When ordering please state:

1. exact tyre size resp. circumference
2. calibration for kilometres or miles.

Circumference	Tyre Size	JOST Part Number
2915mm	275.70-22.5 11.70-22.5	J2915MM
3175-3220mm	10.00-20 11.00-22.5 14.80-22.5 295.80-22.5 315.75-22.5 375.70-20 405.70-20	J10/00/20

# Mounting instructions for Hubodometer

When mounting the hubodometer to your existing hub-cap proceed as follows:

Check whether there is enough clearance to the end of the axle, at least 6 mm clearance is required after mounting. The contact surface of the hub-cap must be flat, if necessary by machining. Drill the concentric 13 mm mounting hole. Install the hubodometer with the spring washer and nut supplied.

Torque the nut to 15Nm (1,5mkp) maximum, just sufficient to flatten the spring washer.

## Hubodometer - short version

Where fitting has to take place in a restricted space this type of Hubodometer is used. It has a shortened clamping bolt. Fitting is effected using a special plain nut and a combined sealing/retaining ring. Tightening torque max. 15 Nm (1,5 mkp).

Fixing and centring in the axle cap requires a concentric hole of 15,1 mm diameter. With axle caps of more than 2 mm wall thickness the nut should be counterbored.

## Important

The Hubodometer must be fitted concentrically. Oscillations due to running out of true will impair life and accuracy. Check that the permissible vehicle width is not exceeded when the Hubodometer is fitted. No chemical agents should be used when cleaning the Hubodometer.

# JOST Alloy Wheels

## JOST Forged Alloy Wheels

JOST Premium Forged Alloy Wheels are manufactured to exacting standards to suit Australian conditions.

- Half the weight of steel rims\*
- Reduced tyre wear
- Strong and durable
- Increased fuel economy
- Reduced brake maintenance
- 5 year unlimited km warranty
- Available in Machined, Polished and Superchrome™ finishes
- Available for steel wheel conversions including sleeve nuts

\* average weight statement compared to a quality 22.5x8.25 Steel disc wheel equivalent.

# JOST Hydraulic Solutions

## Hydraulic Cylinders

The extensive range of JOST tipping cylinders has been designed for the Australian market and are currently available in 3, 4 and 5 stage and stroke lengths ranging from 2760mm to 8675mm

- All stage hard chroming
- Large stage overlap creating market leading strength & stability
- Heavy Duty Forged double welded Trunnion
- Spherical seal and bearing design
- Full lifting capacity at industry standard 135bar operating pressure
- Full 2 year warranty backed by JOST Australia nationwide support

Refer to the JOST website  
[www.jostaustralia.com.au](http://www.jostaustralia.com.au)  
for the full Hydraulic  
catalogue.

# Service Tools

## Tools To Make Your Job Easier

- Jost Australia offer a selection of tools and gauges to make your job easier.
- Including simple 'No-Go' gauges in addition to rated lifting tools and fifth wheel testers.
- All tools are designed for common ADR specified wear limits as well as JOST specific tolerances.
- Tools to suit king pins, locking jaws, coupling pins, tow eye bushes, ball couplings and more.

Fig.	Description	Part No.
1	Lock jaw gauge to suit 36, 37, 42	JOSTGAUGELOCKJAW
2	Skid plate gauge to suit 50mm king pin	JOSTGAUGESKIDPLATE50MM
2a	Skid plate gauge to suit 90mm king pin	JOSTGAUGESKIDPLATE90MM
3	Tow eye gauge	JOSTGAUGEKNIM150
4	King pin Gauge	JOSTGAUGEKINGPIN
5	R0500 gauge	JOSTGAUGER0500
6	Fifth wheel lifting tool	SK7600701
7	50mm king pin lock tester	SK7600000
7a	90mm king pin lock tester	SK7600090
